

How to make a thaumatrope.

The above two images are used to create a walking person animation.

Step 1

Cut out the two squares above. Don't cut out the inner circles yet.

Step 2

Glue the two squares back to back, making sure the one on the back is upside down and the whole paper is glued not – not just the edges.

Keeping the square shape will help with the alignment of the images.

Step 3

Cut out the circle shape.

If you have not used enough glue in step 2 the two circles will fall apart.

Step 4

Make some holes where the “x” is and loop through some string on each side.

You should now be able to spin your thaumatrope and see the images animate.
